

ColBot – Jupyter

The API can be called directly into Jupyter / python / C# using a HTTP POST request

An example of the API calls is provided in a Jupyter notebook.

Jupyter requires Python & Anaconda installed on your computer.

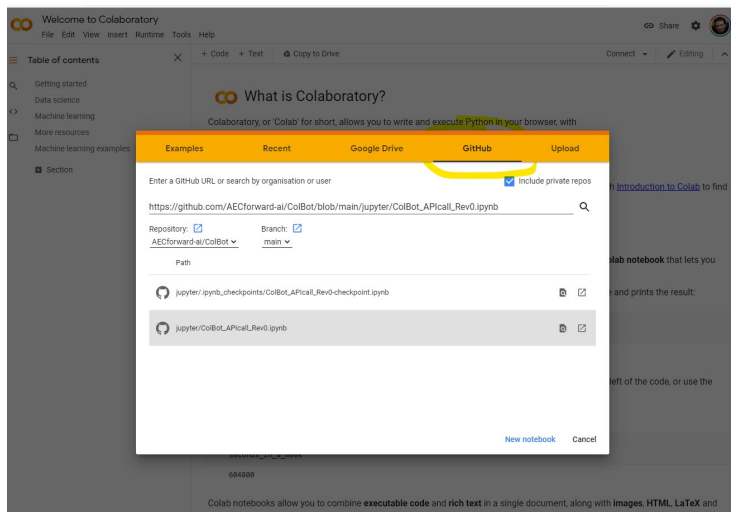

New to python?

If you are new to python, the most straightforward way to experiment is to use Google Collab which runs jupyter notebook in a web page:

<https://research.google.com/colaboratory/>

Paste the github file address, for example:

https://github.com/AECforward-ai/ColBot/blob/main/jupyter/ColBot_APIcall_Rev0.ipynb

Et voila !
